Main activities and responsibilities	I developed a tool to evaluate the quality of UML class diagrams. It is a semi-automatic tool developed in Java with NetBeans using jdom, swing, jdesktop, awt, useful, lang, libraries. This tool works by using files XML and XSD. Files XSD are produced by EMF (Eclipse Modelling Framework), which turns files UML (created by Eclipse, IBM Rational Rose, Poseidon or ArgoUML) into XSD in two steps. The tool measures the UML class diagrams quality, thanks to more than 80 rules, and it also returns an evaluation result with statistical reports.
